

How does EdGate save your time and money?

EdGate helps education companies save countless hours and personnel costs, streamlining the alignment and content enrichment process to help every client successfully market and sell their content assets.

Are you struggling to monitor changes and edits made to learning standards?

EdGate monitors all learning standards so that you won't have to. We capture updates and provide that information to our clients via our API or weekly data feed.

Is your staff aligning your content to standards on a state-by-state basis?

You don't have to! EdGate uses a patented global approach, making it possible to tag content once and map to all applicable standards across all states and countries.

Want to save money and do your alignments using the same technology EdGate uses?

We'll train your team to use our ExACT alignment tool. ExACT alignments can be fully integrated into your system and are yours to keep forever.

Are you forced to re-align your content when states modify their standards?

No need to re-align content each time a state updates standards. Alignments are maintained by EdGate so when standards update, they are automatically reflected in the alignment data.

Do you have content that is already aligned to one state, but want to use that data to map to other states?

EdGate can automatically crosswalk/map your existing alignments to additional states, countries and standard sets.

Are you storing your alignments in countless spreadsheets?

EdGate's ExACT Alignment Platform provides a central location to store all of your metadata and allows for dynamic searching, filtering and alignment of content to standards.

Looking for a completely hands-off correlation process using AI?

Using our ExACT AutoAlign tool, alignments are completed in a fraction of the time, mapping to millions of machine readable standards, including to IEdTech CASE Identifiers.

Do you have great videos or podcasts, but they are not used because there are no keywords to find them?

EdGate uses Automatic Keyword creation to make video and podcast content discoverable and classroom-ready or for sorting content into categories.
